

Nowy Styl

**chooses WEBCON BPS
to digitalize business processes
and implement best practices, increase
process efficiency and reduce operating costs**

NowyStyl

A European leader in comprehensive furniture solutions for office and public spaces. Thanks to their unique business model, they offer an excellent interior furnishing service based on in-depth analysis of clients needs, efficiency, work organization, ergonomics and acoustics.

The solutions are presented in **33 showrooms** located, e.g. in Warsaw, London, Paris, Düsseldorf, Munich, Prague, Bratislava and Moscow. They also have independent structures, facilities and offices in 19 countries across Europe and in the Middle East.

Industry: Production

Country of implementation: Poland

Website: <https://nowystyl.com/en/>

Why WEBCON BPS?

The role of information systems in the Nowy Styl Group is primarily the **standardisation of processes and ensuring the implementations are in accordance with procedures, in a way that is optimal in terms of effectiveness and costs.** In 2009, it became obvious that in order to support the further development of the company, it would be necessary to implement a business process management solution that would effectively optimise processes and flows that were not supported by the functionalities of the enterprise resource planning system already in place. The processes to be implemented included financial document flows, requisitions and cost invoices, suppliers' authorisations and payment control.

Managing an international manufacturing company requires the application of tools that provide best practices, increase process efficiency and reduce operating costs. Microsoft SharePoint is an end user interface for workflows based on WEBCON BPS, which guarantees an easy-to-use and intuitive solution. Microsoft SQL Server is responsible for storing workflow statuses, data, tasks and attachments, enabling great performance and scalability for thousands of users and millions of documents. The system is also integrated with Microsoft Exchange and Microsoft Lync. WEBCON BPS is a comprehensive solution that efficiently manages documents and business processes in the company. Because of its unique workflow engine, external database and open architecture, WEBCON BPS enables efficient handling of the most complex processes, while easily integrating with IT solutions used in the company.

Over **25 years** of experience in the market

Projects realized in over **100 countries** across the globe

Extended distribution and logistics network

220,000 m² of production area in 7 countries

Annual revenue amounts to over **€460 mln**

By implementing WEBCON BPS, the company managed to significantly reduce fixed costs associated with bookkeeping and controlling.

A better quality of the analytical description of documents and the introduction of control and full auditability of cost acceptance processes provided an excellent return on investment. The ability to design workflows by the internal IT department has allowed the company to individually handle subsequent processes, such as the complaints flow. As a result, the system involved the automation of further business processes and groups of new users within companies across Europe, including Germany, England, France and Slovakia.

“

WEBCON BPS helps us automate business processes important to the company, in a way that allows us to achieve the synergy of the operations performed by the group. The electronic document and information flow streamlines decision-making, speeds up processes, enhances their quality and reduces costs across the whole enterprise. It's important the system allows for easy integration and that it offers an efficient and flexible workflow engine, while providing a multilingual easy-to-use and clear interface to end users.

Mariusz Sobociński

Business analysis manager at Nowy Styl

WEBCON®

WEBCON develops the low-code Business Process Automation platform, WEBCON BPS. This enterprise-grade system allows organizations to embrace digital transformation by digitalizing their workflows and building comprehensive, scalable, process-centric and future-proof applications applying the agile DevOps model.

At WEBCON, digital transformation isn't a buzzword – it's a way of life; it's about reducing steps, eliminating mistakes, ensuring compliance, connecting assets, and encouraging continuous improvement. Applications made with WEBCON BPS are scalable, process-centric, low-to-no-code, equally at home online or on-premises, and happily used on both desktops and mobile devices. WEBCON's unique InstantChange™ technology lets customers adapt/evolve processes to address changing needs immediately and painlessly. WEBCON processes are clearly understood and easily governed, and they can be connected to line of business systems, documents, forms, messages, and collaboration workspaces.

Over 500 happy clients worldwide underline the platform's success in effective business process management. WEBCON partners with top-class international IT system integrators from 12 countries who deliver business solutions for industry-leading enterprises.
